

Use the visual model to solve each problem.

 $^{2}/_{4} \times 3 =$

To solve multiplication problems with fractions one strategy is to think of them as addition problems.

For example the problem above is the same as:

$$\frac{2}{4} + \frac{2}{4} + \frac{2}{4}$$

 $\frac{2}{4} \times 3 =$

If we shade in 2/4 on the fractions below 3 times we can see a visual representation of the problem.

 $\frac{2}{4} \times 3 = 1 \frac{2}{4}$

After shading it in we can see why 2/4 three times is equal to 1 whole and $\frac{2}{4}$.

1)
$$\frac{3}{4} \times 4 =$$

2)
$$\frac{1}{5} \times 3 =$$

3)
$$\frac{2}{8} \times 6 =$$

4)
$$\frac{2}{3} \times 4 = \bigcirc$$

5)
$$\frac{1}{3} \times 6 = \bigcirc$$

6)
$$\frac{1}{5} \times 2 =$$

7)
$$\frac{1}{3} \times 4 =$$

8)
$$\frac{1}{3} \times 3 = \bigcirc$$

9)
$$\frac{4}{8} \times 6 =$$

$$\frac{4}{10} \times 6 =$$

11)
$$\frac{2}{10} \times 6 =$$

12)
$$\frac{2}{4} \times 3 =$$

Use the visual model to solve each problem.

 $^{2}/_{4} \times 3 =$

To solve multiplication problems with fractions one strategy is to think of them as addition problems.
