Two Step Problems

Name:

Solve each problem.

1) There are forty students trying out for the school's trivia teams. If nineteen of them didn't get picked for the team and the rest were put into three groups, how many students would be in each group?

1. _____

2. _____

2) Robin uploaded sixty-five pictures to Facebook. She put forty-four pics into one album and put the rest into three different albums. How many pictures were in each of the three albums?

3. _____

4. _____

3) Rachel had seventeen files on her computer. She deleted eight of them and put the rest into folders with three files in each one. How many folders did Rachel end up with?

5. _____

6. _____

4) Carol's team won their baseball game and scored ten points total. If Carol scored six of the points and everyone else scored two points each, how many players were on her team?

7. _____

8. _____

5) Oliver is at the library helping put away books. There are sixty-seven book to put away total but a librarian takes forty of them and leaves Oliver with the rest. If he can fit nine books on a shelf, how many shelves will he need?

9. _____

10. _____

6) A store had thirty-nine coloring books in stock. They ended up putting them on sale and getting rid of eleven of them. The put the ones they still had onto shelves with seven on each shelf. How many shelves did they use?

7) Lana was planting vegetables in her garden. She started with twenty-eight seeds and planted eight of them in the big garden and in each of her small gardens put five seeds each. How many small gardens did Lana have?

8) A company invited seventy-one people to a luncheon, but thirty-nine of them didn't show up. If the tables they had held eight people each, how many tables do they need?

9) A waiter had fifty-five customers in his section. If thirty-five of them left and the rest of his tables had four people at each table, how many tables did he have?

10) Paul bought eighteen tickets at the state fair. He spent two tickets at the 'dunk a clown' booth and decided to use the rest on rides. If each ride cost two tickets, how many rides could he go on?

1) For Halloween Amy received 97 pieces of candy. She ate 25 pieces then placed the rest into piles with 9 in each pile. How many piles could she make?

2. _____

3. _____

2) Sam had 53 pieces of clothing to wash. He put 32 of them in one load, but decided to split the rest into 7 equal loads. How many pieces of clothing could go in each of the small loads?

4. _____

5. _____

3) The cafeteria had 72 apples. For lunch they handed out 37 to students and decided to use the rest to make pies. If each pie takes 5 apples, how many pies could they make?

6. _____

7. _____

4) A pet store had 63 puppies. In one day they sold 43 of them and put the rest into cages with 5 in each cage. How many cages did they use?

8. _____

9. _____

5) A store had 32 coloring books in stock. They ended up putting them on sale and getting rid of 20 of them. The put the ones they still had onto shelves with 2 on each shelf. How many shelves did they use?

10. _____

6) Janet baked 57 cupcakes for her school's bake sale. If her brother, Todd, ate 45 of them how many packages could she make if she put 3 cupcake in each package?

7) Frank is at the library helping put away books. There are 70 book to put away total but a librarian takes 14 of them and leaves Frank with the rest. If he can fit 7 books on a shelf, how many shelves will he need?

8) Jerry bought 95 tickets at the state fair. He spent 32 tickets at the 'dunk a clown' booth and decided to use the rest on rides. If each ride cost 9 tickets, how many rides could he go on?

9) Gwen had 68 files on her computer. She deleted 50 of them and put the rest into folders with 2 files in each one. How many folders did Gwen end up with?

10) Carol's team won their baseball game and scored 29 points total. If Carol scored 14 of the points and everyone else scored 5 points each, how many players were on her team?

Solve each problem.

1) For Halloween Debby received ninety-one pieces of candy. She ate forty-two pieces then placed the rest into piles with seven in each pile. How many piles could she make?

1. _____

2. _____

2) A waiter had eighty-three customers in his section. If forty-seven of them left and the rest of his tables had six people at each table, how many tables did he have?

3. _____

4. _____

3) A company invited sixty-five people to a luncheon, but thirty-three of them didn't show up. If the tables they had held four people each, how many tables do they need?

5. _____

6. _____

4) George had ninety-six dollars. If he spent twenty-four bucks on a new game, how many eight dollar toys could he buy with the money he had left?

7. _____

8. _____

5) There are twenty-seven students trying out for the school's trivia teams. If fifteen of them didn't get picked for the team and the rest were put into four groups, how many students would be in each group?

9. _____

10. _____

6) A pet store had thirty-seven puppies. In one day they sold sixteen of them and put the rest into cages with three in each cage. How many cages did they use?

7) Katie's team won their baseball game and scored fifty-seven points total. If Katie scored forty-five of the points and everyone else scored four points each, how many players were on her team?

8) John had fifty-three pieces of clothing to wash. He put thirteen of them in one load, but decided to split the rest into eight equal loads. How many pieces of clothing could go in each of the small loads?

9) Bianca baked twenty-six cupcakes for her school's bake sale. If her brother, Todd, ate eight of them how many packages could she make if she put two cupcake in each package?

10) Lana uploaded seventy-two pictures to Facebook. She put forty-two pics into one album and put the rest into five different albums. How many pictures were in each of the five albums?
