

Let's jump into the world of an extraordinary critter, the camel cricket! These amazing insects get their name from their humpbacked appearance, similar to a camel. They have long, spider-like legs and bodies that can grow up to 1.5 inches long. Their color ranges from light to dark brown, allowing them to blend in with their surroundings.

From their unique looks, we hop to their fascinating homes and diets. Camel crickets are found all over the world, especially in cool, damp places like caves, under stones, and in human basements. They are omnivorous scavengers, which means they'll munch on just about anything, from fungi, plant materials, to even other insects. Sometimes, they even eat each other when food is scarce!

Now that we've explored their homes and diets, let's leap into their life cycle and interactions. Camel crickets go through three stages: egg, nymph, and adult. They usually keep to themselves but can be a nuisance to humans when they invade homes, though they do not pose any serious threats. In the wild, they serve as a food source for other animals and help in breaking down decaying plant material.

From their role in the ecosystem, let's bounce to some unique facts and differences. Unlike their cricket cousins, camel crickets do not chirp because they don't have wings. Their 'humpback' design and long legs differentiate them from other cricket species and help them jump high when they are threatened. So, next time you spot a silent, jumping critter in your basement, remember it might just be a harmless camel cricket playing its part in the circle of life.

**Solve each problem.****Use the article to answer the question.**

- 1) What is the color of camel crickets?
 - A. Their color ranges from light to dark brown.
 - B. They are colorful with vibrant red and yellow patterns.
 - C. They are black and white, like a zebra.
 - D. They are transparent and can blend with any color.

- 2) What do camel crickets get their name from?
 - A. Their ability to go a long time without water
 - B. Their humpbacked appearance
 - C. Because they spit like a camel does
 - D. They tend to hang around camels

- 3) What happens when food is scarce for camel crickets?
 - A. They may eat other camel crickets.
 - B. They grow smaller and require less food.
 - C. They hibernate until food is available again.
 - D. They migrate to find new food sources.

- 4) What do camel crickets do when they are threatened?
 - A. They release a foul-smelling odor to deter predators.
 - B. They make a loud noise to scare off predators.
 - C. They jump high when they are threatened.
 - D. They play dead when threatened.

- 5) How does a camel crickets chirp compare to other crickets chirp?
 - A. Camel crickets chirps are much louder.
 - B. Camel crickets do not chirp.
 - C. Camel crickets chirps are much quieter.
 - D. Camel crickets produce a low buzzing sound instead of chirping.

- 6) Where can we commonly find camel crickets?
 - A. They live in tall trees within dense rainforests.
 - B. They are commonly found in vast, open grassland.
 - C. They are found in cool, damp places.
 - D. They are found in hot, dry desert environments.

- 7) What do camel crickets eat?
 - A. They feed exclusively on blood of larger animals.
 - B. They feed only on nectar and pollen from flowers.
 - C. They eat just about anything, from fungi to other insects.
 - D. They prey solely on other insects and small animals.

- 8) Which is not a stage camel crickets go through in their life cycle?
 - A. Adult
 - B. Nymph
 - C. Pupa
 - D. Egg

-
- 57) It's interesting to note that Camel crickets are not actually true crickets!
 - 58) Camel crickets are generally harmless and do not bite humans.
 - 59) How do camel crickets get their name?
 - 60) What do camel crickets eat?
 - 61) It's disgusting that camel crickets may eat each other if food is scarce!
 - 62) Camel crickets prefer dark and humid environments like basements and crawl spaces.
 - 63) What are some predators of camel crickets?
 - 64) Camel crickets can survive without food for weeks, that's amazing endurance!

- 1) What is the color of camel crickets? (paragraph 1)
 - A. Their color ranges from light to dark brown.
 - B. They are colorful with vibrant red and yellow patterns.
 - C.
 - D.
- 2) What do camel crickets get their name from? (paragraph 1)
 - A. Their ability to go a long time without water
 - B. Their humpbacked appearance
 - C.
 - D.
- 3) What happens when food is scarce for camel crickets? (paragraph 2)
 - A. They may eat other camel crickets.
 - B. They grow smaller and require less food.
 - C.
 - D.
- 4) What do camel crickets do when they are threatened? (paragraph 4)
 - A.
 - B. They make a loud noise to scare off predators.
 - C. They jump high when they are threatened.
 - D.
- 5) How does a camel crickets chirp compare to other crickets chirp? (paragraph 4)
 - A.
 - B. Camel crickets do not chirp.
 - C.
 - D.
- 6) Where can we commonly find camel crickets? (paragraph 2)
 - A.
 - B. They are commonly found in vast, open grassland.
 - C. They are found in cool, damp places.
 - D.
- 7) What do camel crickets eat? (paragraph 2)
 - A. They feed exclusively on blood of larger animals.
 - B. They feed only on nectar and pollen from flowers.
 - C. They eat just about anything, from fungi to other insects.
 - D.
- 8) Which is not a stage camel crickets go through in their life cycle? (paragraph 3)
 - A. Adult
 - B. Nymph
 - C. Pupa
 - D.
- 9) What is the size of a fully grown camel cricket? (paragraph 1)
 - A. They are half a foot long
 - B.
 - C.
 - D. About an inch and a half

- 10) Do camel crickets pose a serious threat to humans? (paragraph 3)
- A.
 - B. They have a poisonous bite that can harm humans.
 - C. No, they do not pose any serious threats to humans.
 - D.

Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

11) "I am only found in tropical areas." (paragraph 2)

12) "I love chirping all night long." (paragraph 4)
