

Solve each problem.

$$5.47 \times 10^4$$

This is the same as saying:
 $5.47 \times (10 \times 10 \times 10 \times 10)$

And because the base is 10 you can just move
 the decimal 4 places to the right to solve.

$$5.47 \times 10^4 = 54,700$$

5 4 7 0 0.

$$2.36 \div 10^2$$

Division is the same way. Only instead of
 moving the decimal right, you move it left.

You can also multiply a negative exponent,
 which means the same thing.

$$2.36 \times 10^{-2} = 2.36 \div 10^2$$
